

Structural Heart Fellowship (Non ACGME)

Program Director Name (Year appointed)	Haidar Yassin, MD and Marvin H. Eng, MD (2021)
Current Approved Complement	1
Accreditation Status	N/A
Length of Training	1 year

Accomplishments

New innovative projects can enhance our national and international reputation. Some examples include:

- ▶ Transcatheter tricuspid valve replacement. We will be one of few and select institutions to provide this innovation to the region.
- ▶ Percutaneous septal myotomy: this new innovation through the NIH can elevate the status of Banner — University Phoenix that no other center will be able to provide in the neighboring region. This is a key facet for performing transcatheter mitral valve replacement.
- ▶ Quality improvement for structural and interventional procedures. As the new cardiovascular quality director, we intend to improve quality outcomes for the institution.

Strengths

1. New program co-directors and team with experience and strong academic record
2. We offer rotations/procedures for our fellow to join at three Valley institutions, giving them a variety of experiences, attendings and labs to work in
3. Weekly and monthly meetings with other structural heart faculty members
